

Dear Patient,

Please consider these two men's health questions:

1. Are you unable to achieve or maintain an erection?

These are symptoms of Erectile Dysfunction (ED), which affects approximately 30 million men in the United States.¹ This common condition can impact men emotionally and affect the most intimate relationships.²

2. Do you experience urinary leakage when doing activities like lifting, exercising, sneezing, and coughing?³

These are symptoms of stress urinary incontinence. Up to 30% of men leak urine following prostate cancer surgery.⁴

If you answered "yes" to any of these questions, you may be interested in an upcoming educational, free men's health seminar sponsored by American Medical Systems.

To learn more about ED and/or male stress urinary incontinence (bladder leakage), we encourage you and your spouse/partner to join us for this free Men's Health Seminar. There will also be remarks from a previous patient so you can hear about his experience firsthand. Light refreshments will also be served.

For additional questions or directions, please call 505-433-4655 Thank you!

Sincerely,

Sincerely,

Wayne Kuang, M.D.

American Medical Systems, Inc. has sponsored this patient seminar and accompanying educational material. This information is being provided to you by MD For Men to inform you of an opportunity to learn more about a treatment option you may wish to consider. Your health care provider believes that this information could be useful to you based on your specific diagnosis or treatment at MD For Men. American Medical Systems (the host of this educational seminar) has paid a third party to cover the cost of this mailing to you. You may opt out of receiving these communications about alternate treatment options at any time by contacting MD For Men: 505-433-4655.
